

OPERATION WORKFLOW

CORRECTIVE MAINTENANCE

PREVENTIVE MAINTENANCE

Administrative Monitoring Center

- Make an annual plan with scope and frequency based on the Contract
- Agree the plan with the Investor
- Distribute the plan to the nearest Branch

Nearest O&M Branch

- Receive annual plan
- Make a specific implementation plan for each period and agree with the Investor no later than 05 working days before every expected implementation date.
- Prepare human resources, materials, and equipment

Team Manager

- Ensure all necessary permitting procedures and licenses are complete before implementation
- Assign, lead, and supervise the implementation of specific works

Specialized Technicians

- Implementation of assigned works carefully and harmonically
- Collect typical images of each specific work
- Collect full image data, video recording, ... when detecting defects, dangers, risk factors, ...
- Summarize work results and send to direct Management Branch

Detect abnormalities or incidents

- Prompt report to the Administrative Monitoring Center
- Perform corrective maintenance procedures if permitted (see more in Corrective Maintenance section)

Finish the process

- Verify the operation of the entire system
- Clean and sanitize work areas
- Inform to direct Management Branch
- Communicate and coordinate to finish procedures at the project

Management Branch

- Collect information from specialized technicians
- Confirm the completion of the work
- Notify the completion of maintenance to the Investor
- Analyze data and make reports
- Submit maintenance reports to the Administrative Monitoring Center

Administrative Monitoring Center

- Obtain maintenance reports
- Control content, adding conclusions and recommendations (if necessary)
- Submit preventive maintenance reports to the Investor
